Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Reference is made to the following document:

D1: WO 00/20358 A , cited in the application

2. The document D1 is regarded as being the closest prior art to the subject-matter of claim 1, and shows compounds comprising a tetrahydronaphthalene moiety, and their therapeutic use.

The subject-matter of claim 1 differs from these known compounds, in that one or more silicon atoms replace one or more carbon atoms in the tetrahydronaphthalene moiety.

The subject-matter of claim 1 is therefore new (Article 33(2) PCT).

3. With the demonstrated activity of the presently claimed compounds, the problem underlying the present invention could be seen as the provision of further compounds which contain a tetrahydronaphthalene moiety which act as GnRH antagonist. With the demonstrated superior activity of a presently claimed silica-compound relative to a prior art carbon-compound, the problem could be seen as the provision of improved compounds which contain a tetrahydronaphthalene moiety which act as GnRH antagonist. As there appear to be no teachings in the available prior art that would allow a person skilled in the art to modify the teachings of D1 so as to arrive at the present solution, the present application is considered to involve an inventive step (Article 33(3) PCT).

Claims 2-30 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.
